1. Math

1.1. Sieve of Eratosthenes

```
1  const int N = 1e7;
2  int sieve[N];
3  void make(){
4      for(int i = 0; i < N; i++) sieve[i] = 1;
5      sieve[0] = sieve[1] = 0;
6      for (int i = 2; i < N; i++)
7          {
8              if(sieve[i]){
9                  for (int j = i*i; j < N; j+=i)
10                     {
11                         sieve[j] = 0;
12                     }
13             }
14         }
15 }
```

1.2. Binary Exponentiation

```
1  long long pote(long long a, long long b, long long mod){
2      long long ans = 1ll;
3      while(b){
4          if(b&1) ans = (ans * a)%mod;
5          a = (a * a)%mod;
6          b>>=1;
7      }
8      return ans;
9  }
10 // a-1 = amod-2 = pote(a, mod-2);
```

1.3. Modular Inverse

```
1  const long long N = 1e6 + 10;
2  const int MOD = 1e9+7;
3  long long fact[N];
4  long long invfact[N];
5  void init(){
6      fact[0] = 1;
7      for(long long i = 1; i < N; i++)
8          fact[i] = fact[i-1] * i % MOD;
9
10     invfact[N-1] = pote(fact[N-1], MOD-2);
11
12     for(long long i = N-2; i >= 0; i--)
13         invfact[i] = invfact[i+1] * (i+1) % MOD;
14 }
15
16 long long nCk(long long n, long long k){
17     if(k < 0 || k > n) return 0;
18     return fact[n] * invfact[k] % MOD * invfact[n-k] % MOD;
19 }
```

1.4. Pollard Rho Rabin Miller

```
1  map<long long, long long> fact;
2
3  long long mcd(long long a, long long b) {
4      a = abs(a);
5      b = abs(b);
6      while (a != 0) {
7          long long r = b % a;
8          b = a;
9          a = r;
10     }
11     return b;
12 }

9. Utilities

9.1. Int128

```
1  // --- LECTURA B SICA ---
2  __int128 read128() {
3      string s;
4      cin >> s;
5      __int128 n = 0;
6      int sign = 1;
7      size_t start = 0;
8
9      if (!s.empty() && s[0] == '-') {
10         sign = -1;
```

```

11     start = 1;
12 }
13
14 for (size_t i = start; i < s.length(); ++i) {
15     n = n * 10 + (s[i] - '0');
16 }
17
18 return n * sign;
19 }
20
21 // --- IMPRESI N B SICA ---
22 void print128(__int128 n) {
23     if (n == 0) {
24         cout << 0;
25         return;
26     }
27     if (n < 0) {
28         cout << '-';
29         n = -n;
30     }
31     string s;
32     while (n > 0) {
33         s += (char)('0' + (n % 10));
34         n /= 10;
35     }
36     reverse(s.begin(), s.end());
37     cout << s;
38 }

```

9.2. Merge Sort

```

1 // Rango de uso: 0-indexed.
2 // Llamar en el solve como: mergeSort(v, 0, n - 1);
3 ll ans = 0;
4
5 void mergeSort(vector<ll> &v, int low, int high) {
6     if (low == high) return;
7
8     int mid = (low + high) >> 1;
9     mergeSort(v, low, mid);
10    mergeSort(v, mid + 1, high);
11
12    queue<ll> L, H;
13    for (int i = low; i < mid + 1; i++) {
14        L.push(v[i]);
15    }
16    for (int i = mid + 1; i < high + 1; i++) {
17        H.push(v[i]);
18    }
19
20    for (int i = low; i < high + 1; i++) {
21        if (L.size() == 0) {
22            v[i] = H.front();
23            H.pop();
24        }
25        else if (H.size() == 0) {
26            v[i] = L.front();
27            L.pop();
28        }
29        else {
30            if (L.front() <= H.front()) {
31                v[i] = L.front();
32                L.pop();
33            }
34            else {
35                v[i] = H.front();
36                H.pop();
37                ans += L.size(); // Inversion detectada
38            }
39        }
40    }
41 }

```

9.3. Prefix Sum 2D

```

1 //1 indexed
2 const int N = 1005;
3 int v[N][N];
4 int acu[N][N];
5 int n, m;
6

```

```
7 void solve() {
8     //limpiar la acu para cada TC
9
10    // Construcción: acumula 1 si el elemento es exactamente 1
11    for (int i = 1; i <= n; i++) {
12        for (int j = 1; j <= m; j++) {
13            int val = (v[i][j] == 1 ? 1 : 0);
14            acu[i][j] = val + acu[i - 1][j] + acu[i][j - 1] - acu[i - 1][j - 1];
15        }
16    }
17
18    // Esquinas de consulta:
19    // (a, b) -> Superior Izquierda
20    // (c, d) -> Inferior Derecha
21    int a = 2, b = 2, c = 4, d = 4; // Valores de ejemplo
22
23    int ans = acu[c][d] - acu[a - 1][d] - acu[c][b - 1] + acu[a - 1][b - 1];
24    cout << ans << '\n';
25 }
```

9.4. Random

```
1 mt19937 rng(chrono::steady_clock::now().time_since_epoch().count());
2 // mt19937_64 para 64 bits usar uint64_t o unsigned long long
3 cout << rng() << endl;
4 shuffle(v.begin(), v.end(), rng);
```
