1. Math

1.1. Sieve of Eratosthenes

```
1  const int N = 1e7;
2  int sieve[N];
3  void make(){
4      for(int i = 0; i < N; i++) sieve[i] = 1;
5      sieve[0] = sieve[1] = 0;
6      for (int i = 2; i < N; i++)
7      {
8          if(sieve[i]){
9              for (int j = i*i; j < N; j+=i)
10             {
11                 sieve[j] = 0;
12             }
13         }
14     }
15 }
```

1.2. Binary Exponentiation

```
1  long long pote(long long a, long long b, long long mod){
2      long long ans = 1ll;
3      while(b){
4          if(b&1) ans = (ans * a)%mod;
5          a = (a * a)%mod;
6          b>>=1;
7      }
8      return ans;
9  }
10 // a^-1 = a^mod-2 = pote(a, mod-2);
```

1.3. Extended Euclides

```
1  //Encuentra
2  //valores para x e y
3  //A*x + B*y = gcd(A, B)
4  ll extgcd(ll a, ll b, ll &x, ll &y){
5      if(b == 0){
6          x = 1;
7          y = 0;
8          return a;
9      }
10
11      ll x1, y1;
12      ll g = extgcd(b, a % b, x1, y1);
13      x = y1;
14      y = x1 - (a / b) * y1;
15      return g;
16  }
17
18  void solve(){
19      ll A, B, C;
20      cin >> A >> B >> C;
21      ll x, y;
22      ll g = extgcd(A, B, x, y);
23      if(C % g != 0){
24          cout << "-1\n";
25          return;
26      }
27      ll k = -C / g;
28      x *= k;
29      y *= k;
30      cout << x << " " << y << '\n';
31  }
```

1.4. Fibonacci Log(n)

```
1  long long int fibo(int n) {
2      long long int a, b, x, y, tmp;
3      a = x = tmp = 0;
4      b = y = 1;
5      while (n != 0)
6          if (n % 2 == 0) {
```

```

7         tmp = a * a + b * b;
8         b = b * a + a * b + b * b;
9         a = tmp;
10        n = n / 2;
11    } else {
12        tmp = a * x + b * y;
13        y = b * x + a * y + b * y;
14        x = tmp;
15        n = n - 1;
16    }
17    // x = fibo(n-1)
18    return y; // y = fibo(n)
19 }

```

1.5. Modular Inverse

```

1  const long long N = 1e6 + 10;
2  const int MOD = 1e9+7;
3  long long fact[N];
4  long long invfact[N];
5  void init(){
6      fact[0] = 1;
7      for(long long i = 1; i < N; i++){
8          fact[i] = fact[i-1] * i % MOD;
9      }
10     invfact[N-1] = pote(fact[N-1], MOD-2);
11
12     for(long long i = N-2; i >= 0; i--){
13         invfact[i] = invfact[i+1] * (i+1) % MOD;
14     }
15
16     long long nCk(long long n, long long k){
17         if(k < 0 || k > n) return 0;
18         return fact[n] * invfact[k] % MOD * invfact[n-k] % MOD;
19     }

```

1.6. Pollard Rho Rabin Miller

```

1  map<long long, long long> fact;
2

21 }

```

4. Bit Manipulation

4.1. Binary Representation

```
1  string tobit(long long x) {
2      string a(64, '0');
3      for (int i = 63; i >= 0; --i) {
4          if (x & 1) a[i] = '1';
5          x >>= 1;
6      }
7      return a;
8  }
```

4.2. Bit Mask

```
1  for(int mask = 0; mask < (1 << n); mask++) { //(1 << n) = 0(2^n)
2      for(int i = 0; i < n; i++) { // 0(n)
3          //verificamos si el i-esimo bit esta encendido
4          if(mask & (1 << i)) {
5              cout << v[i] << " ";
6          }
7      }
8  }
```

4.3. Bits Prendidos En Un Numero X En Una Posicion Pos

```
1  //retorna el numero de bits prendidos
2  //en una posicion pos desde 0 hasta el numero num
3  //tambien se puede usar en rangos asi:
4  //prendidos(k, l) - prendidos(L-1, l);
5  ll prendidos(ll num, ll pos){
6      if(num <= 0){
7          return 0;
8      }
9      ll pote = (1ll << pos);
10     ll blocks = (num + 1) / pote;
11     ll ones = blocks / 2;
12     ones *= pote;
13     if(blocks & 1){
14         ones += (num + 1) % pote;
15     }
16     return ones;
17 }
18 //Sabrosson
```
